

ASSIGNMENT – 4a

Estimate the bicarbonates of well water based on its pH value using simple regression model. Consider SGD optimizer. Dataset: Union Carbide Technical Report

- Do the manual calculation for two iteration by taking only first two samples in the dataset

Sample (i)	x_i^a	y_i^a
1	7.6	157
2	7.1	174

Step 1: $\eta = 0.01$, epochs=1, $m=-1$ and $c=-1$

Step 2: Set Iteration = 1

Step 3: Set Sample $i = 1$

Step 4: $Y = 1(7.6)-1 = 6.6$

Step 5: $E = 0.5*(157+6.6)^2 = 13382.48$

Step 6: $dE/dm = -(157+6.6) * 7.6 = -1243.36$ and $dE/dc = -(157+6.6) = -163.6$

Step 7: $\Delta m = -(0.01) (-1243.36) = 12.4336$ and $\Delta c = -(0.01) (-163.6) = 1.636$

Step 8: $m = -1 + 12.4336 = 11.4336$ and $c = -1 + 1.636 = 0.636$

Step 9: Sample $i = i + 1 = 2$ and $2 < n, = 4$

Step 10: $Y = (11.4336) (7.1) - 0.636 = 81.14256$

Step 11: $E = 0.5*(174+81.14256)^2 = 134.37128$

Step 12: $dE/dm = -(174+81.14256) * 7.1 = -1908.072176$ and $dE/dc = -(174+81.14256) = -255.14256$

Step 13: $\Delta m = -(0.01) (-1908.072176) = 19.08072176$ and $\Delta c = -(0.01) (-255.14256) = 2.5514$

Step 14: $m = 11.4336 + 19.08072176 = 30.51432176$ and $c = 0.636 + 2.5514 = 3.1874$

Step 15: Sample $i = i + 1 = 2$ and $2 \text{ not } < n, = 2$

Step 16: iteration=iteration+1=2 and iteration not < epochs

Step 17: Stop
